RSOP FOR FACILITY DISPOSITION NOTIFICATION LETTER FOR BUILDING 451  
FEG-030-04

Attached is a draft transmittal letter to the Colorado Department of Public Health and Environment for the RSOP notification for Building 451 facility disposition. The draft transmittal letter has been prepared from DOE building point of contact to CDPHE building point of contact; however, it could also be addressed from DOE RFCA coordinator to CDPHE RFCA coordinator.

Please contact Steve Nesta X6386 with questions or concerns.

**RSOP FOR FACILITY DISPOSITION NOTIFICATION LETTER FOR BUILDING 451**

Mr. Kruchek:

In accordance with the Rocky Flats Cleanup Agreement Standard Operating Protocol (RSOP) for Facility Disposition, this letter and its attachments is notification for RSOP implementation. This notification is for all activities required to demolish and disposition Building 451.

The Reconnaissance Level Characterization Report for Building 451 was submitted to CDPHE, and received official concurrence on 11/21/02. Building 451 has been determined to be a Type 2 facility due to radiological contamination in excess of the uranium DCGL<sub>w</sub> and widespread Be contamination in the 1<sup>st</sup> filter stage. A fixative has been applied to the Be remaining in the building to reduce the Be-potential for release during demolition. The Utility Room and south-side of the 2<sup>nd</sup> filter stage of Building 451 meet free release criteria. Fixed radiological contamination remains in the demister, 1<sup>st</sup> filter stage, and north side of the 2<sup>nd</sup> filter stage. These portions of the building will undergo demolition with residual radiological contamination.

This work will be conducted by Kaiser-Hill Company, L.L.C (K-H). The requirements, methods, controls, and processes outlined in the RSOP will be followed. This work will be conducted in accordance with the work control documentation prepared by K-H and its subcontractor. The exact methods and process and progress of the activities will be communicated to DOE/LRA through the consultative process. A schedule for this work is attached.

As indicated in the RSOP, the LRA has 14 days to review the RSOP notification letter and provide feedback, including a definitive reason for not proceeding with the project. If no feedback is received within 14 days, the project will proceed as planned.

If you have any questions regarding this, please contact me at (303) 966-6003.

Gary Morgan  
U.S. Department of Energy

## DESCRIPTION OF PLANNED ACTIVITIES

### Facility Description and Scope of Demolition

Building 451 is a 2780-sq. ft. two-stage HEPA filter plenum located south of Building 447. The filter plenum was constructed in 1983 and provided ventilation to Buildings 447 and 448.

Building 451 is a single-story steel-framed building constructed on a concrete slab. The walls and roof are constructed of corrugated steel, with several marine-type airtight access doors.

Building 451 was serviced by the following utilities: water and electric. Fire suppression is provided by overhead sprinkler system.

Demolition of the structure will be executed by heavy equipment. The demolition equipment will begin on the south side of the building and proceed northward. Efforts will be made, if possible, to ensure that debris falls within the building footprint. The demolition will commence with the utility room and south-side of the 2<sup>nd</sup> filter stage starting from the southwest side of Building 451. Debris from this portion of the demolition will be managed at a non-routine sanitary waste and disposed at an RFETS approved landfill (Front Range or BFI – Commerce City). The north side of the 2<sup>nd</sup> filter stage, the 1<sup>st</sup> filter stage, and demister portions of Building 451 will undergo demolition with residual radiological contamination. Debris from this portion of the demolition will be managed as low level waste and disposed at Enviorcare of Utah. The Building 451 slab did not come into direct contact with the building's interior as Building 451 had a separate metal floor. However, post demolition beryllium and radiological surveys will be performed and used to determine an appropriate disposal path for the slab. If survey results are acceptable, the Building 451 slab will remain in place, as it is four (4) feet below final grade.

### Pre-Demolition Survey Report (PDSR)

During the RLC, radiological survey results indicated that radiological contamination in excess of the uranium DCGL<sub>w</sub> was present throughout the demister and 1<sup>st</sup> and 2<sup>nd</sup> filter stages of building 451. Also, surveys identified beryllium (Be) contamination throughout the facility. The Be and uranium contaminated areas of the utilities room and 2<sup>nd</sup> filter stage (south-side) have been decontaminated and/or removed under implementation of the Facility Component Removal, Size Reduction, and Decontamination Activities RSOP. The demister, 1<sup>st</sup> filter stage, and north side of the 2<sup>nd</sup> filter stage will undergo demolition with residual radiological contamination. A Pre-Demolition Survey report (PDSR) has been prepared that verifies the effectiveness of the decontamination for the utilities room and south side of the 2<sup>nd</sup> filter stage of building 451. Also, the PDSR establishes that no removable beryllium or radiological contamination is present in the demister, 1<sup>st</sup> filter stage, and north side of the 2<sup>nd</sup> filter stage of the facility. The PDSR establishes the building as being ready for demolition and is being submitted concurrently with this RSOP notification.
